PROFESSIONAL EXPERIENCE

Co-Creator, Software Engineer, Test Lab

11/2022 – present | Remote

Test Lab is an open-source, self-hosted platform for creating and managing A/B experiments, feature toggles, and feature rollouts.

- Innovated and implemented "user-block" strategy  to ensure that users are not enrolled in concurrent experiments, preserving the integrity of experiment data.
- Designed and developed the Admin UI with React and Tailwind CSS, for CRUD feature management, including ensuring that users do not exceed experiment availability for a provided date-range.
- Developed the back-end server, which exposes RESTful APIs for managing feature, user, and experiment-related event data stored in PostgreSQL.
- Designed native Node, React, Ruby, and Python SDK packages, with assignment logic to evaluate features and render user-specific variants while ensuring concurrent experiment exclusivity.
- Authored a comprehensive case study  on the engineering challenges and design decisions made during the creation of Test Lab.
- Created full documentation  for Test Lab.
- Collaborated with remote team of four engineers across four time-zones using Agile workflow.
